

SUSTAINABLE DEVELOPMENT

We are committed to contributing to a more sustainable future by following ISO 26000 guidelines and Agenda 2030. Our work is focused on supporting UN's 17 Sustainable Development goals.

We place high demands on our suppliers and contractors to live up to the environmental and quality standards that exist. We place equally high demands on ourselves as on our suppliers.

We want to contribute to this work by focusing on and working with the following goals:

M2: Circularity, resource usage and material innovation

Circular models and reducing waste are central to the steel industry. In our machine park, we tailor the strip steel for our customers' processes and products. This maximizes material utilization and performance, which leads to reduced waste.

E4: Creating a sound value chain

We promote a sustainable value chain by working towards CO2 neutrality together with our suppliers. Our Code of Conduct includes those of UN's 17 Sustainable Development goals that are relevant to our operations. We also aim to use environmentally friendly and recyclable packaging material and follow international sanction rules for social and environmental responsibility.

M3: Fighting climate change and its effects

We are committed to achieving minimal environmental impact through low emissions and careful selection of partners. We update our technology to reduce energy consumption, and we constantly adapt based on changes and expectations.

K7: Educating the market

We want to have clear communication with our customers and suppliers about our sustainability work. We aim to share our work for a more sustainable future through various channels and welcome a dialogue to constantly improve.

S3: Contributing to skills development and job creation

By sponsoring local sports clubs, being visible at company fairs and collaborating with universities and colleges, we want to reach out to young talents and job seekers and strengthen our local presence. Through on-the-job training, we promote skills development for both new and existing staff.

A2: Creating good working conditions

We work actively for a sustainable work environment where dialogue and the employees' influence are central. Together we work for a fair and sustainable working environment.
